

## Recommended settings for tablets (especially if your members have limited technology experience):

- Create Google/Apple account unless the client already has one. Need the account to download apps
- Turn location on for time and weather services – should be default
- Install Virtual Senior Center Mobile App <https://www.vscm.selfhelp.net/app>
- Update the firmware to the latest update - otherwise, they will keep getting notices/warnings to update
- Update all the apps - can be set to auto-update
- Display - set to night view - easier on the eyes (optional)
- Display - timeout set to 10/15 minutes - **very important**
- Change to no lock screen, no pin - **very important**
- Turn off all App notifications - too many notifications/alerts
- Remove all unused apps from the Home page (ideally only VSC, Gmail etc)- **keep it nice and simple**
- Change Wallpaper to simple color background - less confusing for the users
- Lock the Home page - so they do not remove/change apps by accident
- Test Class on VSC - make sure can join live class without issue.
